### 2.4. DETERMINANT OF A SQUARE MATRIX

Let $A=\left[\begin{array}{cccc}a_{11} & a_{12} & \cdots & a_{1 n} \\ a_{21} & a_{22} & \cdots & a_{2 n} \\ \vdots & \vdots & \ddots & \vdots \\ a_{n 1} & a_{n 2} & \cdots & a_{n n}\end{array}\right]$ be a real matrix of order $n$.

The determinant of a matrix $A$ is a number which can be joined to that matrix and is marked by

$$
\operatorname{det} A \text { or }\left|\begin{array}{cccc}
a_{11} & a_{12} & \cdots & a_{1 n} \\
a_{21} & a_{22} & \cdots & a_{2 n} \\
\vdots & \vdots & \ddots & \vdots \\
a_{n 1} & a_{n 2} & \cdots & a_{n n}
\end{array}\right| \text {. }
$$

If $\boldsymbol{A}=\left[\boldsymbol{a}_{11}\right]$, then $\operatorname{det} \boldsymbol{A}=\boldsymbol{a}_{11}$.
If $A=\left[\begin{array}{ll}a_{11} & a_{12} \\ a_{21} & a_{22}\end{array}\right]$, then $\operatorname{det} A=\left|\begin{array}{ll}a_{11} & a_{12} \\ a_{21} & a_{22}\end{array}\right|=a_{11} a_{22}-a_{21} a_{12}$.

### 2.5. DETERMINANT OF THE MATRIX OF ORDER $\boldsymbol{n} \geq 3$

The minor of the element $a_{i j}$ of the matrix $A$ is determinant of the matrix that is formed from the matrix $A$ by deleting its $i$ th row and $j$ th column. We denote that number by $M_{i j}$.

Example 2.18
For $A=\left[\begin{array}{cc}3 & 1 \\ 2 & -4\end{array}\right]$ is

$$
M_{11}=-4, M_{12}=2, M_{21}=1, M_{22}=3 .
$$
